Nucor increased its CSP for hot-rolled products to \$61.50 per cwt (\$1,230 per ton) for the remainder of the week, up by \$0.50 per cwt, or 0.82%, from \$61.00 per cwt (\$1,220 per ton) in the previous week.

Fastmarkets' **steel hot-rolled coil index, fob mill US Midwest** averaged \$62.54 per cwt in the week ending Tuesday, up by \$0.16 per cwt or 0.26% from an average of \$62.38 per cwt in the previous assessment period.

The Midwest index was most recently calculated at \$62.94 per cwt on Tuesday.

European HRC suppliers push for higher prices; Southern buyers follow, resistance persists in the North

By Vlada Novokreshchenova - Tuesday 06 October

European hot-rolled coil suppliers continued to push for higher prices this week, with limited availability supporting prices in Southern Europe, while buyers in the North remained resistant to increases amid weaker demand and sufficient inventories.

A seller source confirmed that €740 (\$829.27) per tonne ex-works was the key tradeable level in Northern Europe but added that transactions take place up to €760 per tonne ex-works.

A buyer source reported an indication of a tradeable level at €740 per tonne ex-works, adding that mills in the region target higher prices but slow demand is limiting the acceptance.

Fastmarkets' **daily steel hot-rolled coil index, domestic, exw Northern Europe**, was calculated at €745 per tonne on Tuesday October 6, up by €3.12 per tonne from €741.88 per tonne on Monday October 5.

The index was down by €1.25 per tonne week on week and down by €3.75 per tonne month on month.

The Italian market was called "concerning" by one of the buyers, citing limited availability of the material in the market. Acciaierie d'Italia (ADI) is in the process of shutting down its blast furnace while Metinvest's Ferriera Valsider has a significant backlog with only minor potential availability for December. This makes Arvedi the sole stable supplier in the Italian market.

A buyer source reported tradeable levels varying within the range of €740-745 per tonne ex-works on October 6.

Fastmarkets' **daily steel hot-rolled coil index, domestic, exw Italy**, was calculated at €745 per tonne on Tuesday October 6, stable day on day.

The index was up by €2.5 per tonne week on week and by €22.29 per tonne month on month.

On the import side, Taiwanese material was heard available at around €765 per tonne DDP, while Japanese-origin offers came at around €760 per tonne DDP. Turkish hot-rolled coil (HRC) was reported offered at €560-580 per tonne CFR.

Saudi Arabia HRC import prices increase, stock levels low

By Serife Durmus - Tuesday 06 October

The prices for hot-rolled coil imports into Saudi Arabia increased, and stock levels were low because of the long delivery times, sources told Fastmarkets on Tuesday October 6.

The Yemeni Houthi militants continued to attack ships passing through the Strait of Bab al-Mandeb, and also attacked King Abdullah bin Abdulaziz International Airport in Jazan and Najran International Airport during the past week, sources told Fastmarkets.

Delivery to Saudi Arabian ports continued to be problematic, and congestion at the ports continued.

"Freight is \$90-95 per tonne from Tianjin to Jeddah, and estimated sailing time to discharge day is 120 days," a trader said.

1.2 mm gauge HRC was offered by a Chinese mill at \$640-645 per tonne CFR Jeddah for late November shipping before the Chinese Golden Week holidays started (October 1-7).

Another mill in China offered HRC of 1.2 mm thickness at \$580 per tonne FOB, which is \$670-675 per tonne CFR Saudi Arabia, for December shipping.

Sources said the price was not workable.

Buyers indicated workable levels would be around \$640-650 per tonne CFR.

One deal for 3 mm thick HRC was heard at \$620 per tonne CFR from China for December loading.

Another deal for 1.8 mm and thicker HRC was heard at \$600 per tonne CFR last week.

No major deals were heard for 1.2 mm gauge because of Chinese holidays, despite low stock levels in Saudi Arabia.

Fastmarkets' weekly price assessment for **steel hot-rolled coil import, CFR Saudi Arabia (1.2 mm gauge)** was \$640-650 per tonne on October 6, rising from \$625-640 per tonne on September 29.

Galvanized and coated steel news

EU steel exports fall 20% in H1 2026 as production remains near record lows, EUROFER says

By Ivelina Nikolova - Tuesday 06 October

EU steel exports fell sharply in the first half of 2026, while production remained close to historic lows and demand growth was expected to stagnate, the European Steel Association (EUROFER) said in its latest economic and steel market outlook report, published on Thursday October 1.

EU steel exports to third countries declined by 20% in the first six months of 2026, driven by an 18% decrease in finished steel product exports, according to EUROFER. The United Kingdom, Turkey, the United States, Switzerland and India remained the largest destinations for EU finished steel products, accounting for 64% of total exports, the report said.

"The 20% fall in exports is an alarming signal of the pressure facing European steel. Combined with production at historic lows and persistently high energy costs, it shows that Europe's industrial recovery is far from secured. The new EU steel trade measure is an essential first step," EUROFER Director General Axel Eggert said in a statement accompanying the report.

Exports declined across almost all major destination markets during the period. Shipments to the United States fell by 29%, while exports to India, Turkey and China dropped by 24%, 21% and 18% respectively.

Among flat steel products, exports weakened across all major categories. Hot-rolled wide strip recorded the steepest decline, down by 24%, while exports of cold-rolled sheet fell by 13%, hot-dipped galvanized products by 12%, coated sheet by 11% and quarto plate by 6%.

Meanwhile, EU crude steel production fell to a record low of 125.8 million tonnes in 2025 and increased slightly by 1.1% in May 2026, but capacity utilization remained low in historical terms at 67%, the report said.

Imports remain elevated despite decline

Total steel imports into the EU fell by 5% in the first half of 2026, while finished steel imports declined by 3%, according to EUROFER data. This happened just before the European Commission **announced country-specific quota allocations** under its new steel import regime on June 30, significantly reducing import quota volumes.

The falling imports trend differed between product segments, EUROFER said. Flat steel imports increased by 2% in the first quarter and by 15% in the second quarter of 2026, supported by higher imports of hot-rolled wide strip. In contrast, long steel imports fell by 18% in the first quarter and by 19% in the second.

The five largest suppliers accounted for 56% of total EU finished steel imports. Turkey remained the largest exporter to the EU, with a 15.7% share, followed by China (12.3%), South Korea (12%), Indonesia (8.8%), India (7.7%) and Ukraine (6.6%), the report said.

Among major suppliers, imports from Indonesia increased by 70%, while shipments from China rose by 40%.

Still, imports accounted for 23% of apparent steel consumption (demand) in the first quarter of 2026, according to the report, while imported material previously represented 30% of the steel demand in 2025.

The report came during times of continued concerns among European steelmakers about import penetration and international competitiveness. Although imports moderated compared with the elevated levels seen in recent years, foreign material continued to account for a substantial share of EU steel consumption, EUROFER said.

Demand growth expected to stall while construction remains key support

According to the association's latest report, EU apparent steel consumption increased by 1.5% year on year to 34.4 million tonnes in the first quarter of 2026.

However, EUROFER forecast apparent steel consumption in 2026 to rise by only 0.1% from around 134.4 million tonnes in 2025, highlighting the fragile nature of the recovery.

The association said that growth had been constrained by persistent weakness in manufacturing industries, disruptions linked to tensions in the Strait of Hormuz and broader geopolitical uncertainty.

The latest forecast suggested that steel demand is stabilizing rather than recovering strongly, despite a modest improvement in overall economic

activity across the bloc. Construction, the EU's largest steel-consuming sector, is expected to remain the main source of support for steel demand.

EUROFER forecast construction output to grow by 1.8% in 2026, supported by infrastructure investment, NextGenerationEU funding and the delayed effects of previous monetary easing measures, despite renewed pressure from higher interest rates.

NextGenerationEU is a temporary instrument, intended to support Europe's economic recovery from the coronavirus pandemic by offering grants and loans to support reforms and investments in the EU, according to the European Commission.

Following growth of 1.3% in 2025, construction activity in the EU is expected to expand by 1.5% in 2026 and accelerate to 2.9% in 2027, as housing markets recover and infrastructure spending increases.

The steel association said construction continued to provide the strongest underlying support for steel consumption, offsetting weakness in more cyclical manufacturing sectors.

Automotive outlook remains weak

By contrast, the automotive sector, one of the EU's key steel-consuming industries, remained under pressure. According to EUROFER, vehicle production had declined for six consecutive quarters and remained significantly below pre-pandemic levels.

This was also mentioned in [EUROFER's previous report published on June 25](#), when the association highlighted the automotive sector's drag on steel demand recovery in the EU.

The association now expected automotive output to fall by 0.9% in 2026, compared with its previous forecast for a 0.2% decline. The downgrade reflects ongoing geopolitical tensions, higher energy costs and uncertainty related to the EU's planned transition to fully electric vehicle sales by 2035.

A recovery is not expected until 2027, when automotive output is forecast to increase by 3.5%. Even then, production volumes are expected to remain well below levels recorded before the Covid-19 pandemic, the latest market report said.

More broadly, EUROFER said steel-using sectors are expected to return to growth in 2026 after two consecutive years of decline. However, the recovery is projected to remain modest and uneven, with construction supporting demand while automotive and other manufacturing sectors continue to face significant challenges.

Steel plate news

US domestic plate prices rise sharply on mill price increase, strong demand

By Melissa VanDervort - Tuesday 06 October

US steel plate prices rose on Tuesday October 6, with sources reporting that persistently high demand and low spot availability have contributed to upward pricing pressure in the domestic plate market.

Fastmarkets' weekly assessment for [steel cut-to-length plate carbon grade, fob mill US](#) was \$77 per hundredweight (\$1,540 per short ton) on Tuesday October 6, up by 3.36% from \$74.50 per cwt on September 29.

Inputs were collected in a range of \$71-79 per cwt, representing offers and general indications of the spot market.

Demand continues to be strong in the domestic plate market, with spot availability very limited at the start of the last quarter of 2026, sources said.

"Demand is good and expected to increase until Q1 [of] 2028," a distributor said.

A second distributor said, "Demand is still pretty good, [and] mills [are] keeping a tight lid on supply, [which is] keeping service center stock levels very low."

Steelmaker Nucor announced a price increase of \$60 per short ton (\$3 per cwt) on [October 1](#), an upward price move that sources said was readily accepted by the market, given high demand and low supply levels.

Many market participants expect further price increases to be announced in the near term.

"Availability is very limited and [we] expect prices to continue to increase for the rest of this year and into next year," a buyer said.

A second buyer concurred, saying, "I expect there will be further price escalations through at least Q1 [of] 2027 as capacity is very tight, scrap prices and iron ore are both jumping, fuel charges are driving up costs, and none of these trends have any natural way of ending."

Lead times were steady at eight to 12 weeks.
